

Is six months post-stroke the end of rehabilitation? Challenging limited thinking to maximise potential

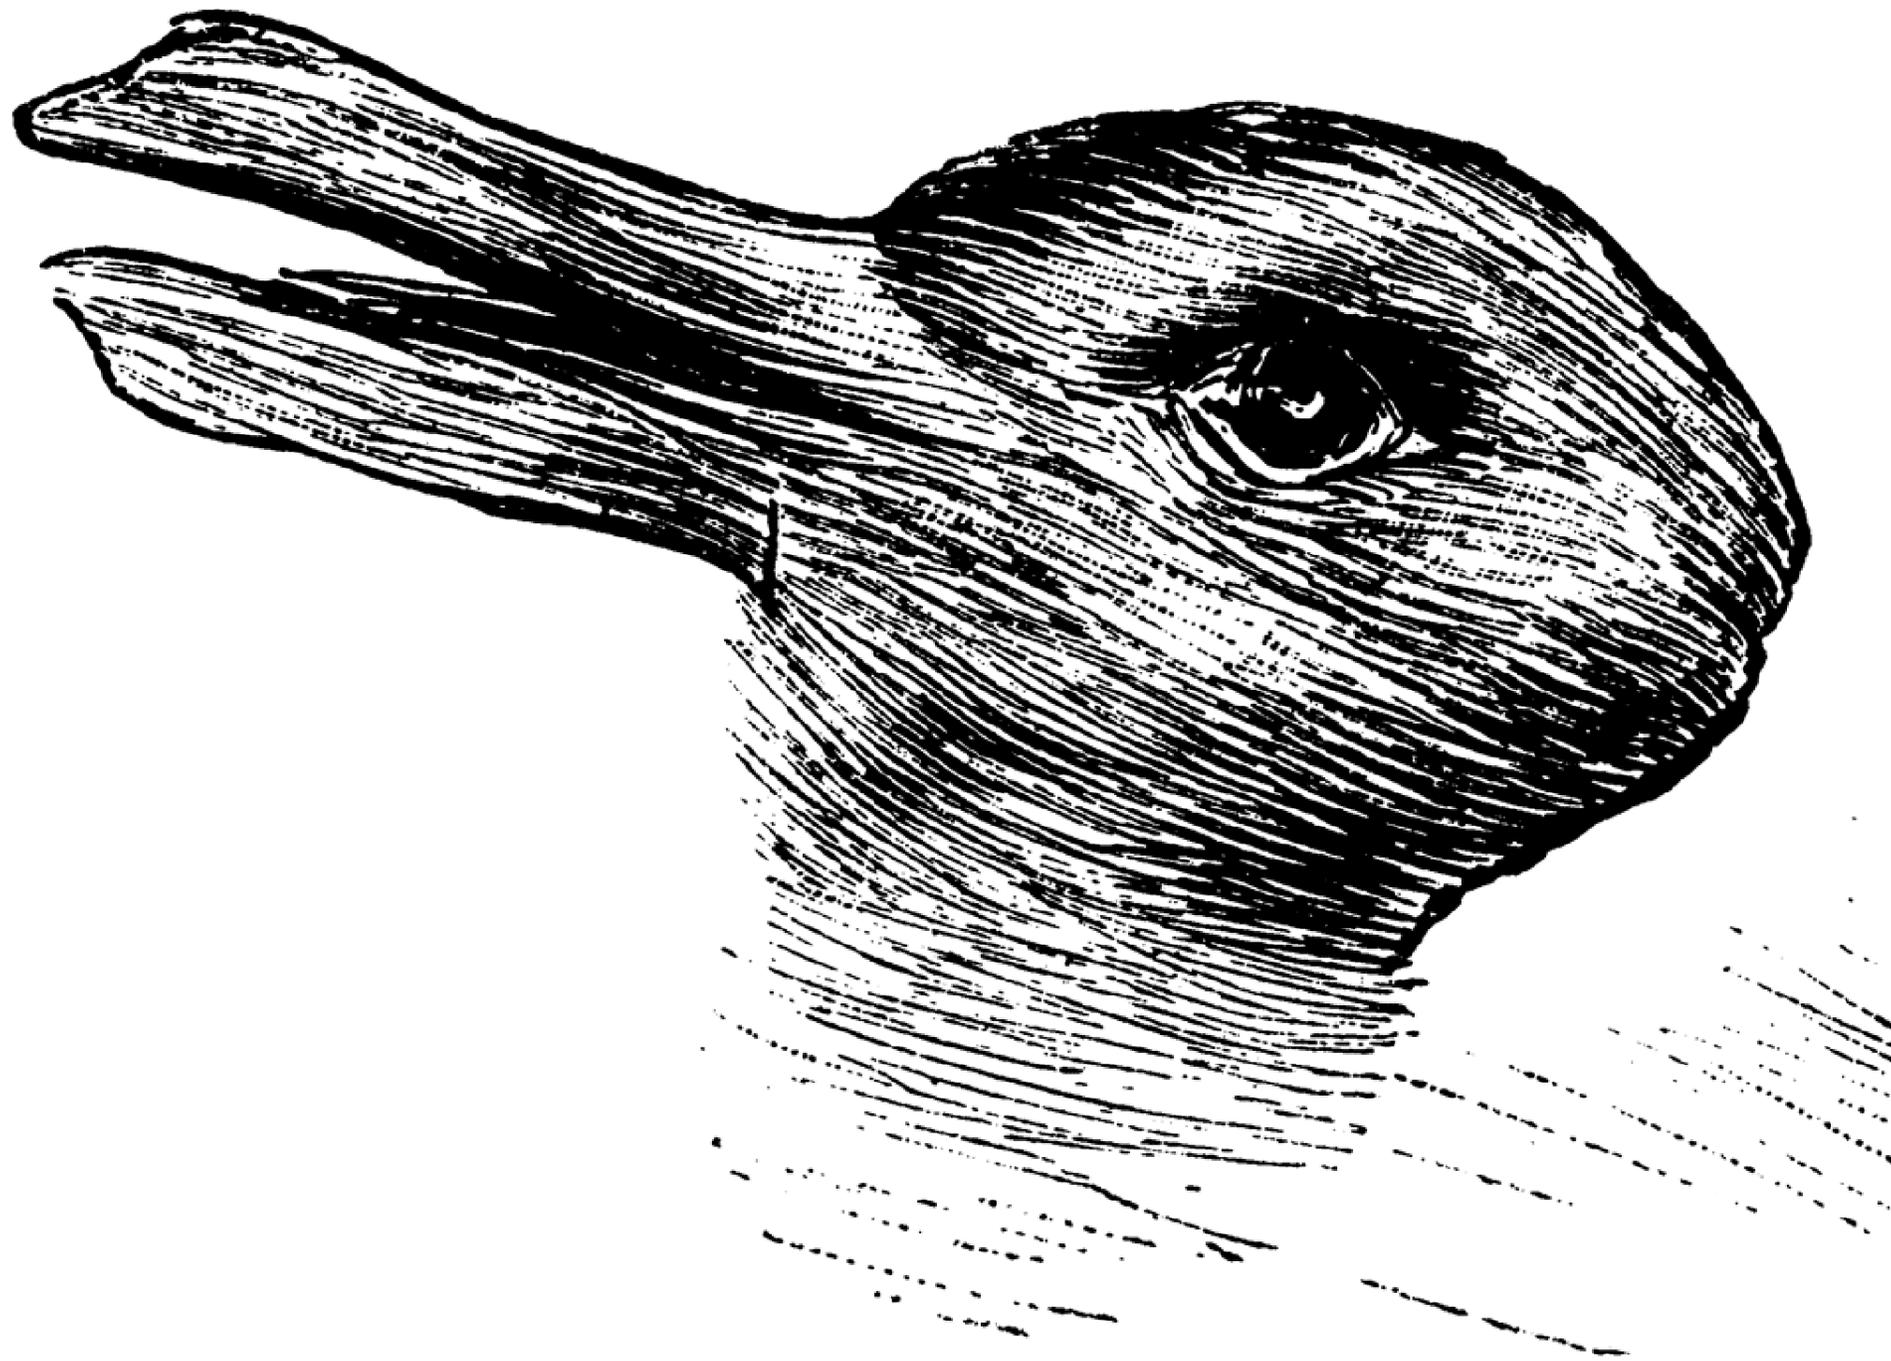

‘Optimising Physical Recovery When Back At Home’

Dr Kenneth Monaghan PhD

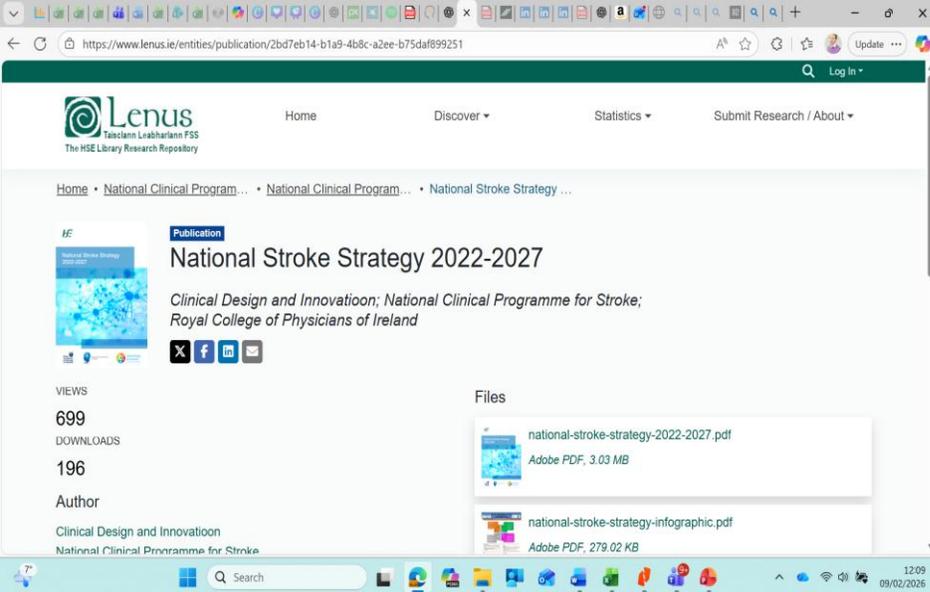

Kenneth.Monaghan@atu.ie

*There Are No Conflicts Of
Interest To Declare*

Do You Think That Your
*‘Brain Can Change
Itself’* At Any Stage
Of Your Life?

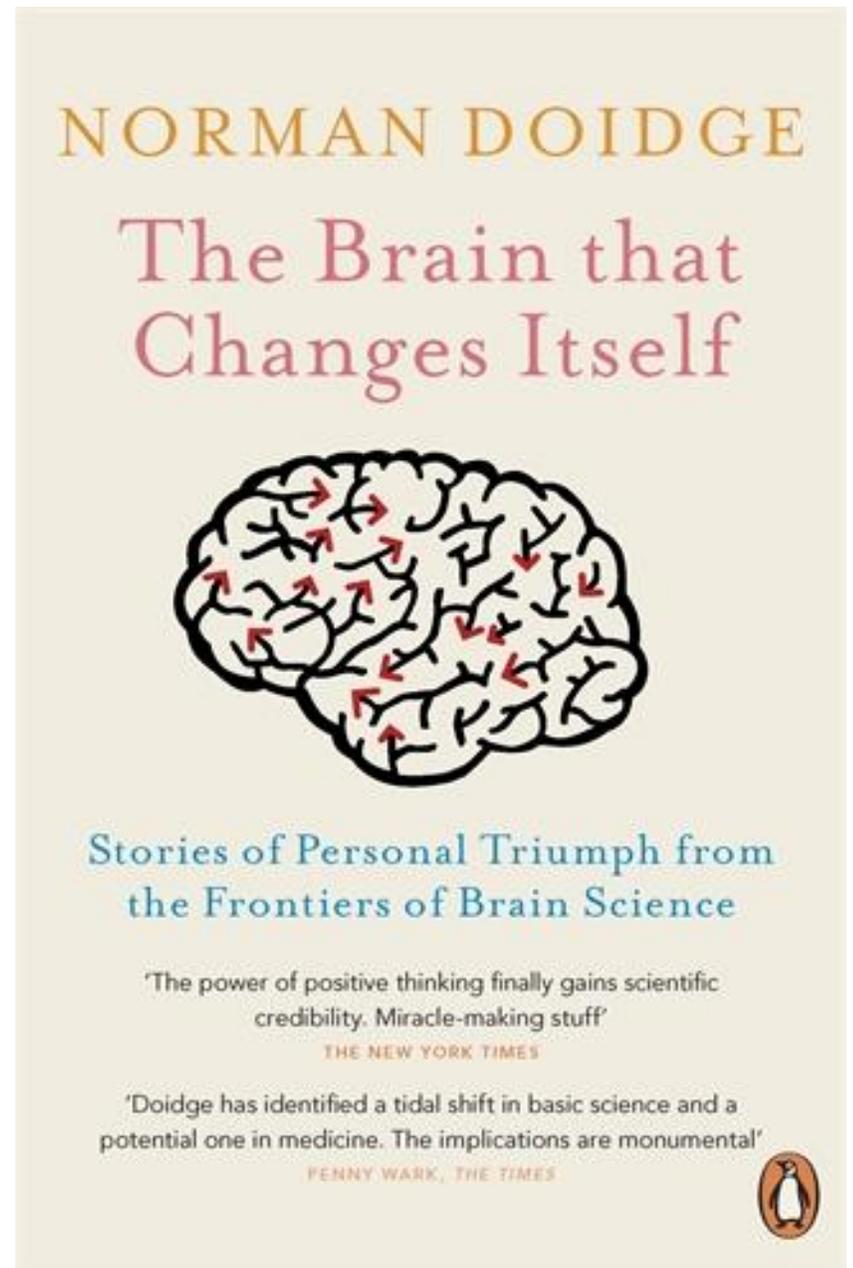

“Recovery doesn’t stop at six months—only services do”

- National Stroke Strategy Ireland 2022–2027 explicitly recognises stroke as a long-term condition, requiring ongoing rehabilitation across the lifespan, not time-limited recovery.
- European Stroke Organisation (ESO) and multiple systematic reviews confirm that neuroplastic change occurs years after stroke, provided the brain is challenged with task-specific, meaningful practice.

The 'Wobblers & Varifocal Glasses' Story

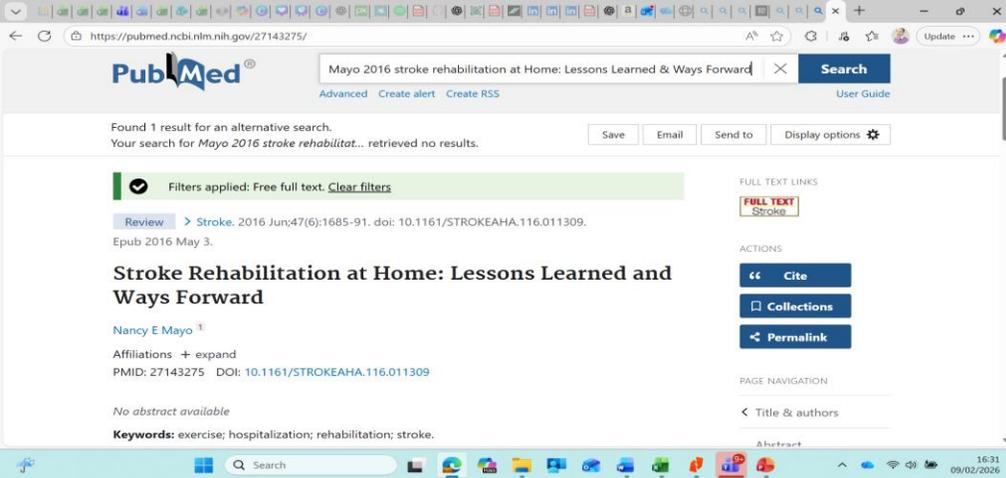

The brain is highly adaptable and capable of **REWIRING** itself throughout life.

Lesson 1:

**“Educate Stroke Survivors
About Neuroplasticity”**

Do You Think That
'Your Home' Can Be A
Powerful
Rehab Setting?

“Home isn’t the absence of Rehab—it can be a most powerful setting”

- **Professor Nancy Mayo** (Mayo 2016) Stroke Rehabilitation at Home: Lessons Learned and Ways Forward.
- The initial Professional guidance carried on successfully at home.
- Home benefits include;
 - Emotional-Cognitive Issues Recognised.
 - Increased Self-Efficacy
 - Active Involvement in Treatment.

The 'Testosterone' Story

- “In hospital, someone practices standing up from a plinth. At home, they practice standing up from the chair they actually use 20 times a day”
- “The brain learns what it practices - Home gives it relevance”

‘Compelling stories combine with cutting-edge science to show why coming first is not the same as being a real winner – engrossing’
OLIVER JAMES, AUTHOR OF AFFLUENZA

The Winner Effect

The Science of Success
and How to Use It

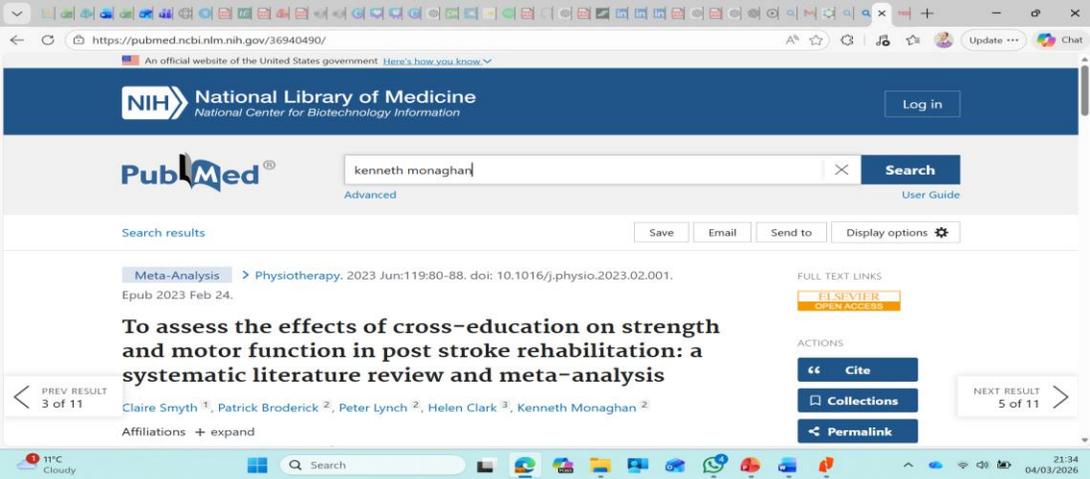

IAN ROBERTSON
BLOOMSBURY

Lesson 2:

**“Rehabilitation Doesn’t
Need a Clinic –
It Needs Meaning”**

Do You Think That
‘What You Believe’ Can
Influence Your Health?

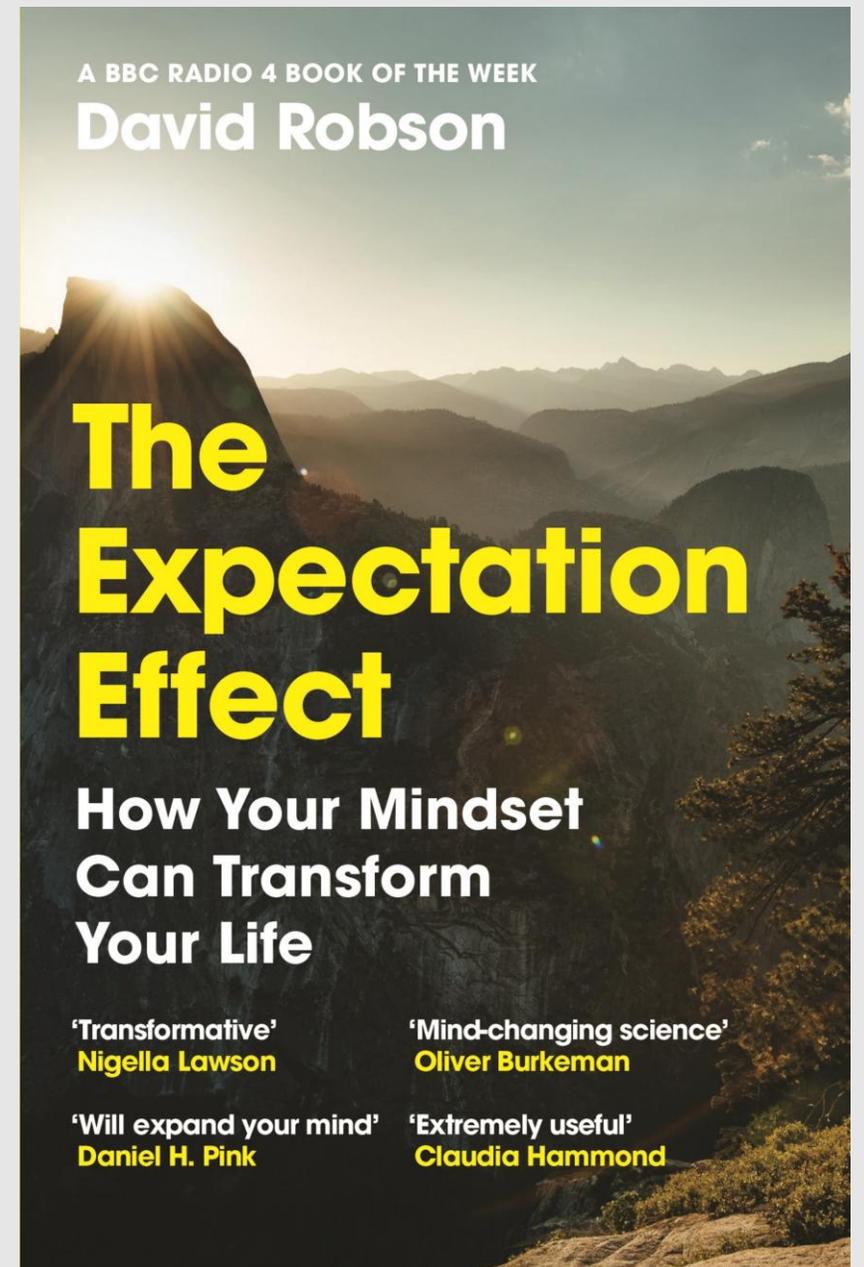

“Innovation doesn’t have to be expensive—just accessible”

- UK & Irish Stroke Guidelines promote/emphasise person-centred care, self-management, and empowerment.
- Psychological research shows self-efficacy influences adherence, engagement, and outcomes (Zang et. al. 2023).
- Neurobiology: motivation, agency, and hope influence dopamine, BDNF, and learning-related neurochemicals, which support neuroplastic change (Bradley & Damiano 2019).

The 'Milkshake Experiment' Story

Our '**BELIEF SYSTEMS**'
influence our
decision making!!

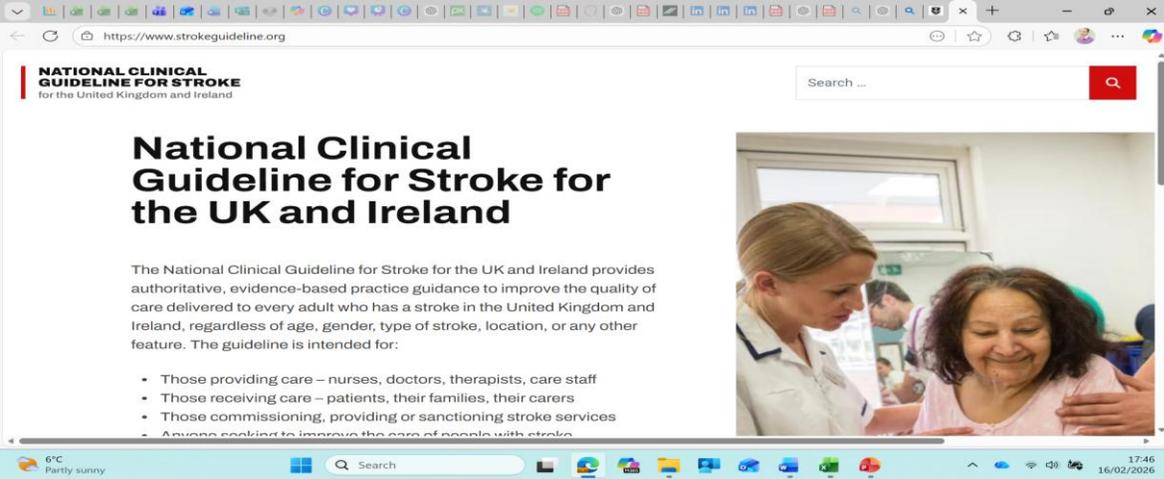

Lesson 3:
“When Belief Changes
–
Biology Follows.”

Do You Think That
‘Innovative Therapies’
Can Be Done At Home?

'Mirror Strengthening Device'

*“Belief Changes
The Chemistry
Of Recovery.”*

- Cross-Education of Strengthening (Smyth et al 2023)
- Neuropilates in Stroke at Home (Cronin et al 2023)
- Sensory Substitution in Neurology (Lynch & Monaghan 2021)
- Mirror Therapy & Cross-Education (Ehrensberger et al 2019)

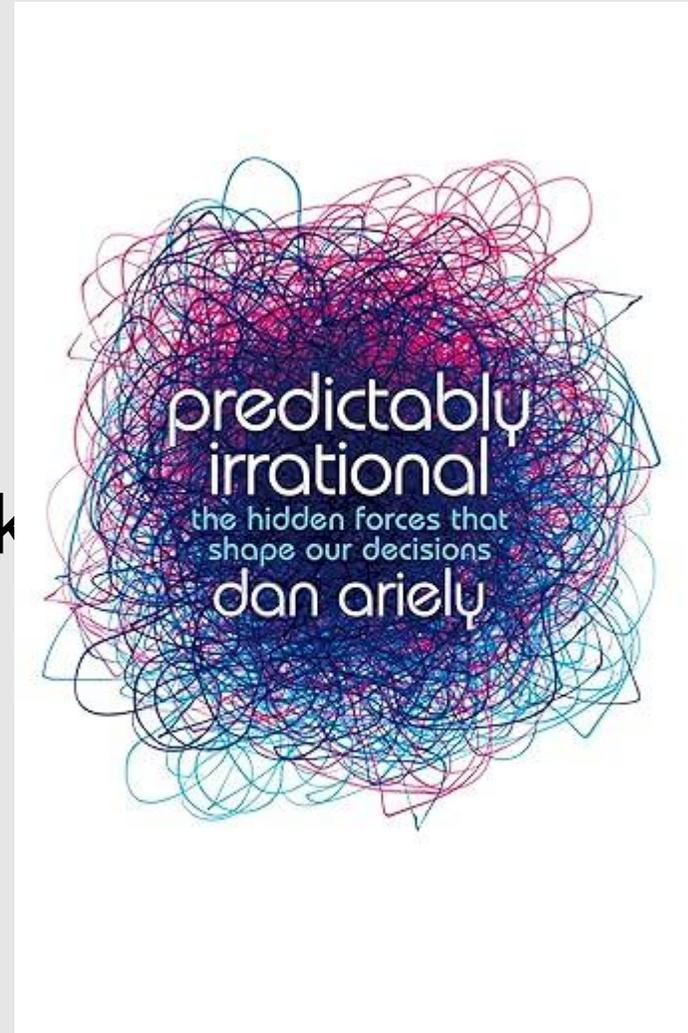

Lesson 4:

“Successful Therapy
Does Not
Need To Be Expensive

Do You Think *'Praising'*
Other People's Work Can
Influence Their Health?

Motivation: The 'Lego' Story

- ❑ Record peoples' work.
- ❑ Encourage people's work.
- ❑ Acknowledge peoples' work
- ❑ Praise peoples' work.
- ❑ **REAP** = Twice the effort.

Lesson 5:

**“Use A Daily Diary To
Record The Effort Your
Stroke Survivor Makes”**

SPEECH: Take Home Advice

- ❑ **Self-belief Important.**
- ❑ **Praise & record 'Hard Work'.**
- ❑ **Educate 'Neuroplasticity'.**
- ❑ **End 'Nonsense'.**
- ❑ **Cost-Effective Therapy.**
- ❑ **Home Is Powerful.**
